## Пример слайда с кириллицей

### Теорема Пифагора

Основная формулировка содержит алгебраические действия — в прямоугольном треугольнике, длины катетов которого равны  $a$  и  $b$ , а длина гипотенузы —  $c$ , выполнено соотношение:

$$a^2 + b^2 = c^2.$$

### Пример программы

```
# Вычисление факториала числа n
def fact(n):
    if (n==1 or n==0):
        return 1
    else:
        return n * fact(n - 1)
```

## First column

- You can use all Markdown features and directly embed  $\LaTeX$

## Second column

- Markdown lists
- With beautiful math:  $x^n + y^n = z^n$
- And easy **Markdown** styles

## First column

- You can use all Markdown features and directly embed  $\LaTeX$
- Beamer allows you to flexibly animate slides with `\uncover<X>` and `\only<X>`

## Second column

- Markdown lists
- With beautiful math:  $x^n + y^n = z^n$
- And easy **Markdown** styles

## First column

- You can use all Markdown features and directly embed  $\LaTeX$
- Beamer allows you to flexibly animate slides with `\uncover<X>` and `\only<X>`
- For images it is better to use vector graphics, e.g. in `.svg` which is automatically converted into `.pdf` via Makefile magic

## Second column

## First column

- You can use all Markdown features and directly embed  $\LaTeX$
- Beamer allows you to flexibly animate slides with `\uncover<X>` and `\only<X>`
- For images it is better to use vector graphics, e.g. in `.svg` which is automatically converted into `.pdf` via Makefile magic
- You can also use `.png` or `.jpg` but they usually look worse than `.svg/.pdf`

## Second column

## First column

- You can use all Markdown features and directly embed  $\text{\LaTeX}$
- Beamer allows you to flexibly animate slides with `\uncover<X>` and `\only<X>`
- For images it is better to use vector graphics, e.g. in `.svg` which is automatically converted into `.pdf` via Makefile magic
- You can also use `.png` or `.jpg` but they usually look worse than `.svg/.pdf`
- Or you can dive deep into TikZ

## Second column

## Summary

- Pandoc = Markdown +  $\text{\LaTeX}$
- Please use this template and never open ~~Google Slides~~ PowerPoint ever again

Thank you for your attention
